PEPSI #3 Guider Shipping Report

This report is for PEPSI guider #3, consisting of Magellan/ITL controller 37, guider dewar 21, and dewar cable 10.

1. This system has no lenslet array bonded to the CCD surface.
2. The CCD is an E2V type CCD57-10-0-127, ITL serial number 5315, E2V serial number 02101-06-09.
3. The readout noise is measured by photon transfer curve as 9.7 electrons at a gain of 1.63 e/DN at a full frame readout time of approximately 1 second.
4. Full well occurs at about 47,000 DN, corresponding to just over 114 kiloelectrons.
5. Dark current is about 0.12 electrons/pixel/second at normal operating temperature.
